

FACTSHEET

Performance Returns

The AlphaQuest UCITS Fund returned -4.33% in January (USD Institutional Founder Share Class).

Investment Objective & Strategy

The AlphaQuest UCITS Fund's investment objective is to seek capital appreciation over the long term.

The AlphaQuest UCITS Fund invests, on a long and/or short basis, in a globally diversified portfolio representing the major asset classes of equities, fixed income and currencies. The AlphaQuest UCITS Fund also gains exposure to commodities, on a long and/or short basis, through the use of structured financial instruments ("SFIs").

Equity index futures provide indirect exposure to the major indices in world equity markets such as the S&P 500, Nikkei 225 and Euro Stoxx 50. Fixed income futures provide indirect exposure to the most liquid categories of interest rates and bonds across a range of underlying maturities, including the Eurodollar 3 Month, US 10 Year and German Bund. Foreign currency futures contracts provide exposure to major currencies such as the US Dollar, Pound Sterling, Euro, Swiss Franc and Japanese Yen. Through SFIs, AlphaQuest UCITS Fund gains exposure to commodity futures including energy, metals and agriculture.

Quest employs a systematic trading program (the "Program"), diversified by asset class and with individual positions intended to provide a return over different time horizons, that seeks to deliver positive alpha (alpha is a statistical measurement used to determine the risk-reward profile of a potential investment). The Program is composed of a number of trading systems, each of which generates individual trades. These trading systems generate trades on the basis of price movement indicators which seek to identify situations where there is potential for an increase in the price volatility of a given market. Risk controls are integrated into the Program to measure the potential risk associated with trades generated by the Program. Generally, the Program will determine that AlphaQuest UCITS Fund should take a long position in a market that has shown an upward trending price or a short position in a market that has shown a downward trending price.

Monthly Commentary

In January 2017, the majority of the under-performance came from two trading systems, the Intermediate Term Trend Following system which has an investment horizon of less than 15 days and the Volatility Breakout system which has an investment horizon less than 5 days.

These trading systems tend to perform poorly when volatility is low and there are choppy, short-term reversals in markets (i.e. environments where a market moves for a few days in one direction and then reverses and moves in the other direction for the next few days, in each case making a marginal new high or low). The program looks for volatility expansion potential and can be challenged in such high mean reversion environments characterized by the sharp reversals observed in the current market.

Volatility has become highly compressed recently as indicated by the following data points:

- The S&P 500 has not had a move greater than or less than 1% for 47 consecutive days (as of December 7, 2016 to February 15, 2017). This is has just surpassed the 43 day run witnessed last July through September 2016.
- The 20-day realized volatility for the S&P 500 is 6.2%, the lowest since September 2016 and before that December 2014, when it reached 4.1%.
- Quest's measure of average implied volatility across various markets is at its lowest level in three years.

Quest's experience suggests that such low volatility, high mean-reversion environments are a harbinger of future volatility expansion.

USD Institutional Founder Share Class UCITS Performance

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sept	Oct	Nov	Dec	Y-T-D
2017	-4.33%												-4.33%
2016	-	-	-	-	-	-	-	-	-	-	-	-0.22%	-0.22%

THE MANAGER

Nigol Koulajian

Founder and Chief Investment Officer

Nigol has been designing and trading short and long-term technical systems for over 24 years. Mr. Koulajian began his career with Andersen Consulting and then moved to Deutsche Bank, where he helped create and computerize a risk management system that became a widely used tool for senior management. He then became the Head Trader for Carmel Capital and while working at Carmel

designed and priced hedges on international equity and fixed income arbitrage positions. In 1996, Mr. Koulajian joined Weston Capital Management, LLC where he was the Director of Asset Allocation and Product Development, responsible for the allocation of assets to equity hedge funds and CTAs. In 1998, Mr. Koulajian started Avalon Asset Management, LLC, a fund of funds, and in 1999, he co-founded a CTA, Enterprise Asset Management, LLC. Mr. Koulajian earned an MBA in finance from Columbia Business School and a BS in electrical engineering from Notre Dame.

Paul Czkwianianc

Head of Research

Paul joined the firm at its inception in 2001. Mr. Czkwianianc started his career in the financial industry in 1999 at Enterprise Asset Management where he worked alongside Mr. Nigol Koulajian. Mr. Czkwianianc holds a B.S. degree in Applied Mathematics from Columbia University and an M.S. degree in Mathematics from New York University.
