

FACTSHEET

Performance Returns

The AlphaQuest UCITS Fund returned -2.54% in May (USD Institutional Founder Share Class).

Investment Objective & Strategy

The AlphaQuest UCITS Fund's investment objective is to seek capital appreciation over the long term.

The AlphaQuest UCITS Fund invests, on a long and/or short basis, in a globally diversified futures portfolio representing the major asset classes of equities, fixed income and currencies. The AlphaQuest UCITS Fund also gains exposure to commodities, on a long and/or short basis, through the use of structured financial instruments ("SFIs"). The AlphaQuest UCITS Fund targets, over the medium term, a realized volatility in the range of 10%-12%, in order to adhere to the UCITS investment restrictions.

Quest employs a systematic trading program (the "Program"), diversified by asset class and with individual positions intended to provide a return over different time horizons, that seeks to deliver positive alpha (alpha is a statistical measurement used to determine the risk-reward profile of a potential investment). The Program is composed of a number of trading systems, each of which generates individual trades. These trading systems generate trades on the basis of price movement indicators which seek to identify situations where there is potential for an increase in the price volatility of a given market. Risk controls are integrated into the Program to measure the potential risk associated with trades generated by the Program. Generally, the Program will determine that AlphaQuest UCITS Fund should take a long position in a market that has shown an upward trending price or a short position in a market that has shown a downward trending price.

Monthly Commentary

Performance during the month of May was impacted by short-term, choppy conditions in Commodities, Fixed Income and Currencies.

Commodities experienced challenging conditions, after falling sharply early in the month. Crude Oil and Gasoline markets experienced an abrupt reversal on the expectation of output cuts by OPEC and then rallied for the rest of the month. These reversals affected our models that trade intermediate trends, i.e. time horizons of 5-15 days. Natural Gas exhibited very short-term reversals lasting only a few days. This price behavior affected our short-term volatility break out models that trade less than 5 days. Some of the losses were recovered towards the end of the month as Natural Gas prices collapsed. Similar patterns were observed in Fixed Income, specifically the US 10-year and 5-year, as well as in Currencies, specifically USD/JPY. Our models were able to catch the strong trends in Equities and delivered steady gains from the asset class for the month.

Given the environment, the portfolio has adjusted to a lower risk level. As you are no doubt aware, volatility has been compressing across many markets to their lowest levels in 10 years and in some instances to 50 years. In this environment, our models are looking for volatility expansion, when there are price break-outs. However, in some of the markets, such as those mentioned above, price-break-outs did not result in follow through. Instead, prices reverted back within the range. Our experience shows that such periods are eventually followed by sharp expansions of volatility and the development of new trends. Our models are designed to participate in such expansions and generate positive returns when they materialize. Although predicting the timing of volatility expansions is difficult, the fact that volatility has already declined to historically low levels suggests that further significant volatility compressions are less likely.

USD Institutional Founder Share Class UCITS Performance

THE MANAGER

Nigol Koulajian

Founder and Chief Investment Officer

Nigol has been designing and trading short and long-term technical systems for over 24 years. Mr. Koulajian began his career with Andersen Consulting and then moved to Deutsche Bank, where he helped create and computerize a risk management system that became a widely used tool for senior management. He then became the Head Trader for Carmel Capital and while working at Carmel

designed and priced hedges on international equity and fixed income arbitrage positions. In 1996, Mr. Koulajian joined Weston Capital Management, LLC where he was the Director of Asset Allocation and Product Development, responsible for the allocation of assets to equity hedge funds and CTAs. In 1998, Mr. Koulajian started Avalon Asset Management, LLC, a fund of funds, and in 1999, he co-founded a CTA, Enterprise Asset Management, LLC. Mr. Koulajian earned an MBA in finance from Columbia Business School and a BS in electrical engineering from Notre Dame.

Paul Czkwianianc

Head of Research

Paul joined the firm at its inception in 2001. Mr. Czkwianianc started his career in the financial industry in 1999 at Enterprise Asset Management where he worked alongside Mr. Nigol Koulajian. Mr. Czkwianianc holds a B.S. degree in Applied Mathematics from Columbia University and an M.S. degree in Mathematics from New York University.
